

ABSTRACT OF THE DISCLOSURE

An automatic angle adjusting system for an image capturing device is provided, the image capturing device having an image capturing unit. The automatic angle adjusting system includes a driving device, an angle detector and a controlling device.

- 5 The angle detector detects the location of the image capturing unit. The controlling device calculates an angle of the location of the image capturing unit deviating from a preset angle, and transmits a signal to the driving device that generates a mechanical driving force to rotate and resume the image capturing unit to the preset angle.
